

The City of Boulder has recently completed a Preliminary Engineering Report studying their Wastewater System and identifying several deficiencies that may require correction at some point in the future. The City is also in the process of renewing there wastewater discharge permit which also has the potential to initiate upgrades to the system. As a result, there is a strong potential for a wastewater project prior to 2026 which would likely increase the capacity of the wastewater system beyond current capabilities.

In conclusion, the City of Boulder has the necessary wastewater treatment capacity to serve the new Veterans Home. Permission to connect to the sewer system would be required if the project site is outside of the City Limits.

Sincerely,

STAHLY ENGINEERING & ASSOCIATES, INC.
